FOR IMMEDIATE RELEASE

Exwire Increases its Wireless Internet Services Reach at Lake Tahoe with Acquisition of LTComm

TRUCKEE, Calif. (Nov. 22, 2004) — Exwire, a Truckee-based wireless high-speed Internet service provider, has completed the acquisition of LTComm, Inc. extending the company's service reach from Incline Village, Nevada to Meeks Bay, California including Truckee, Squaw Valley, Alpine Meadows, Lake Tahoe's West Shore, Agate/Carnelian Bay. The company offers high-speed Internet service to homes and businesses in many communities around the Lake that are currently not serviced by other providers.

Exwire's acquisition of LTComm - formerly the wireless broadband division of Lake Tahoe Online (LTOL) based in Truckee - unites the two providers' networks and services to enable reliable, fast Internet connections to the most highly populated resort and residential areas of Lake Tahoe.

"This acquisition brings us much closer to achieving our phase 1 vision to provide reliable, high-capacity, low cost broadband services to the homes and business at and near Lake Tahoe," said Devin Koch, CEO of Exwire. "We'll complete this phase by filling in coverage gaps around Lake Tahoe, rolling out a few new communities like Donner Summit and adding more robust, well-priced business-focused services."

Effective October 31, Exwire's Internet access will reach locations in Incline Village, Agate Bay and Carnelian Bay creating a reach across the Lake Tahoe North Shore and down the West Shore as far south as Meeks Bay. Plans are also underway at a Donner summit-area ski resort and should be announced shortly. Combined with Exwire's existing coverage areas in Squaw Valley, Alpine Meadows, much of Truckee, Northstar and Tahoe City, the company will soon have the ability to serve almost all major North Lake communities.

In addition to in-home residential and business service, Exwire's service extends to a number of public "hotspots" in areas such as Tahoe City, Truckee, Squaw Valley, and Alpine Meadows, enabling day users to retrieve email and surf the web with any WiFi enabled laptop, PDA or cell phone. Access is available for \$2.50 per hour, \$8 per day, \$23 per week, or \$29 per month.

About Exwire

Exwire is a provider of reliable, wireless, high-speed broadband Internet services and hotspot roaming to consumers, small business and resorts in the Lake Tahoe area. The Tahoe area is the first market targeted by the company and is part of an aggressive build out plan reaching throughout the United States.

Exwire is utilizing next-generation non-line-of-sight wireless technology to connect customers to the Internet using radio waves, thus, eliminating the confines of traditional cable or phone wiring. Exwire towers transmit radio signals from a base site to a small, wireless modem, which easily connects the users' computer to the Internet.
